 34-35 T- N\* - I = 2-5-9 = 7 (16/7)

Notes:

**Terri** culminates in the year when Terri (person) turns age 34.

**Ann** culminates every seven (7) years, so the emotional cycle turns 5 times by the time the physical year (Terri) has completed. It closely matches and concludes on the year when Terri turns 35.

**Smith** culminates when Terri turns 24.

The excursion is a lengthy, but useful tool to examine trends in life. It can be weighed against one's personal year, personal month, universal year, or universal month.

If Terri Ann Smith were married in her early 20s (say 21-22), she would need to be careful due to the change in her emotional line (e.g. the J and A) that preceded another five years of change that is offset by her long line of

double R (18 of them) and I (9 of them) on the physical line. This 27 year period is filled with much change, sometimes emotional, often physical.

If Terri Ann Smith were a real person, care would need to be taken with choices, especially those involving family and others. There are many nines to take into account.

No one set should be taken alone; the birthdate with the sub paths would also need to be examined in a timeline against what is seen in the excursion.
